POWER DISTRIBUTION SOLUTIONS

PRODUCT DESCRIPTION
Our power distribution boxes are intended for bringing temporary power connections from main power sources to locations where work is performed. Use of our distribution boxes facilitates safe and orderly temporary power management for work sites.

These distribution boxes were originally designed to meet the extreme demands of marine construction environments, but can be adapted to meet the needs of any construction setting.

Our shop is fitted for building and testing solutions up to 480 volts and we are also capable of providing UL-certified products if desired.

CUSTOMIZABLE
If you know exactly what you need, we can provide a solution to fit. If you are unsure of your complete power distribution needs, we are happy to discuss options and possible solutions to help evaluate your needs.

With years of experience as systems integrators, we understand what it takes to look at situations and listen to our customers in order to provide solutions that meet current needs and allow for future growth.

TESTED FOR QUALITY
Our rigorous quality test for power distribution boxes includes:

- Close inspection of every component used
- Strict adherence to manufacturer installation recommendations
- Short circuit testing
- Placing each connection under a load for sufficient time to ensure proper function
- Following UL best practices
ABOUT ROBINSON ENGINEERING, INC.

Robinson Engineering, Inc. has been providing systems integration, automation, research and development, and other services to clients across the United States and internationally since 1999. We take pride in offering solutions to clients in various industries by taking the time and putting forth the effort to understand individual needs and concerns and engineering the best solution to fit.

SUPPORT

Our facility is located in Yorktown, Virginia and we are able to provide service, support, and consultation on-site or by phone, email, or video chat whenever a concern arises.

We invite you to visit us to see exactly how and where we engineer and fabricate our products.
